Summary of an Academic Misconduct Case:

The story can be found at this link.

Christopher M. Spence is a retired Canadian educator, author, and former Canadian football player, who served as Director of Education for both the Hamilton-Wentworth District School Board and the Toronto District School Board. Born in England to Jamaican parents, he moved to Canada at the age of three and completed his education in Windsor, Ontario. Spence earned a B.A. in criminology from Simon Fraser University, played as a running back in the CFL for the BC Lions until an Achilles tendon injury ended his career, and obtained his B.Ed., M.Ed., and Ed.D. degrees from York University and the University of Toronto.

His career faced a downfall due to plagiarism scandals. In January 2013, he publicly apologized for plagiarizing content in an op-ed for the Toronto Star and resigned as Director of Education after further instances of plagiarism in his writings were discovered. An investigation revealed that his 1996 Ed.D. dissertation contained numerous plagiarized passages, leading the University of Toronto to rescind his degree in June 2017. Subsequently, the Ontario College of Teachers revoked his teaching license in December 2016.

In 2018, Spence lost an appeal to retain his Ed.D., with an appeals tribunal describing the plagiarism as a serious offense. However, he successfully appealed the revocation of his teaching license on the grounds that his mental health issues, including depression and suicidal thoughts stemming from personal challenges, were not properly considered. He intends to seek judicial review regarding the Ed.D. revocation.

Progress on the survey paper:

I successfully set up the simulator for all the branch prediction techniques, CPU and the riscv architecture. I have also started to understand the Advanced branch prediction techniques and how they are implemented in the *gem5* simulator. I would like to have more papers on some of the techniques like Multiperspective Perceptron and Tage-SC-L. That should cover the literature review for the survey paper.

I also started to take notes on everything while scanning and not spending more than 3 minutes on each paper. I should be done with scanning all the papers in a week and get into critical reads on everything. In the mean time I am focusing more on how I want to organize the paper. I have some ideas for now, but I would like to wait a few more days before I confirm to anything. In addition to those, I would really like to a different story than what I have right now, so thinking on that more. Zotero has been really helpful to me in taking notes and organizing the plethora of papers. I should really take into consideration, ©Litmaps, for brain mapping.
